Windom	87	2.0	1.9
Windom Park	142	3.0	2.5
Unknown	75	n/a	n/a
Minneapolis total	7,549	2.0 per 1,000	2.0 per 1,000

* Rate is not stable, because there were fewer than 20 premature deaths during the 10-year period.

** Rate suppressed: Rate is not stable, because there were fewer than 20 premature deaths during the 10-year period, and there were fewer than 1000 persons in the population. Note that the 3 Minneapolis neighborhoods with suppressed rates are primarily industrial and not residential.

Additional technical notes:

Premature death is defined as death that occurs before a person reaches 65 years of age. Premature deaths at Minneapolis nursing homes and boarding care facilities are excluded from neighborhood-level analyses.

Premature deaths were based on 10 years of mortality data (2006-2015). A 10-year period of data was used to ensure greater stability of rates. A 10-year period also helps convey geographic disparities related to the social determinants of health, which manifest over long periods of time.

Population data for rates were based on the 2011-2015 American Community Survey 5-year estimates, adjusted to fit current neighborhood boundaries using the 2010 Census counts (available online at mncompass.org). All rates were age-adjusted to the 2000 US standard population (7 age subgroups, 0-64 years).

September 2017 Update: The crude and age-adjusted rates for Como neighborhood were updated to reflect the correct ACS 5-year population.
